EDUCATION

University of Central Florida

Bachelor of Science in Computer Science; 3.5 GPA

Orlando, FL

Expected Dec. 2027

- Honors: UCF Scholars Award, Dean's List
- Involvement: Knight Hacks and Project Launch Participant

University of Central Florida

Associate in Arts

Orlando, FL

June. 2024 – April 2025

EXPERIENCE

Personal Technical Experience

2020 – Present

Independent

Orlando, FL

- Self-taught, personal experience building, repairing, and troubleshooting PCs and laptops
- Experience fixing consumer electronics for friends, family, and coworkers, including hardware diagnosis and general troubleshooting
- Experience installing and configuring Windows and Linux systems, including dual-boot environments with GRUB and systemd-boot

PROJECTS

NFC Card Game | C, SQLite, RayLib, Arduino

Feb 2026 – Present

- Built a two-player strategy game in C with Raylib, using Arduino NFC readers over serial I/O to turn physical card scans into in-game unit summons and spell effects
- Developed a split-screen rendering pipeline with dual 90-degree rotated viewports, procedural biome tilemaps, and a layered sprite system for flexible card visuals
- Designed a data-driven card architecture with SQLite and JSON-defined stats/effects, enabling rapid balance and content updates without recompilation
- Created internal tools and hardware support for card editing, biome authoring, NFC enrollment, serial debouncing, and multi-reader polling
- Designed and prototyped custom NFC reader controllers for the game, combining soldered electronics with 3D-modeled and 3D-printed enclosures

TECHNICAL SKILLS

Languages: Java, C, C++, Python, SQL

Web: HTML, CSS

Databases: PostgreSQL, SQLite

Libraries / Frameworks: Raylib

Developer Tools: Git, Docker, Vim

Embedded / Hardware: Arduino, NFC integration

CAD / Digital Fabrication: 3D modeling, 3D printing
